HOW TO USE THIS PAPER TOOL

1. Fix the reading order before rolling.
2. Roll five dice. Die 1 chooses page A (1–3) or B (4–6).
3. For each of dice 2–5, use the position key: 1 upper-left, 2 upper-right, 3 middle-left, 4 middle-right, 5 lower-left, 6 lower-right. Drill into the matching rectangle until one word remains.
4. Write down the word. Repeat for the first 11 words of a 12-word phrase or first 23 words of a 24-word phrase.
5. If the path reaches grey space or this panel, discard all five results and start that word again. Rerolling only one die biases the result.
6. The final word contains fresh entropy plus a checksum. Calculate it with a verified offline tool. Never type a real seed into an internet-connected device.

OFFLINE OPTIONS

seedwitness.com
github.com/iancoleman/bip39/releases/latest
bitcoinnorthernbeaches.com/dice-coin-sim

A completed seed is the wallet. Never photograph, scan, email, or cloud-save it.
